FOREWORD

IN the compilation of this book, the aim has been to present floor plans and photographs of characteristic urban high schools. An effort has been made to select buildings which show a careful adaptation of the plan to the educational work carried on in them, and which, at the same time, follow the best standards of orientation, lighting, etc. Preference has also been given to buildings which are distinguished by simple and appropriate rather than highly ornate architectural treatment.

In responding to the growing demands of our civic and social life, the American high school has become a highly organized institution, with numerous and widely varying courses of instruction. For its successful administration the high school requires a carefully adapted building. The planning of such a building is a task of no small size and demands the intensive study and co-operation of expert school authorities and experienced architects.

The plans presented in the following pages have been collected in the hope that they may be helpful and suggestive in a broad way to the study of high-school architecture. They include the work of practically all of the leading official school architects and of many who are specializing in this kind of buildings.

To each of those represented, the compiler acknowledges his grateful appreciation.
